

# Reconditioning/Exchange Program for Double Disc Pumps

## WE'VE TAKEN THE WORRY AND THE WORK OUT OF PUMP REPAIR AND MAINTENANCE.

Nobody knows your Double Disc™ Pump better than the pros at Penn Valley Pump.

We built it, after all. And even though our pumps offer unmatched durability, reliability, and performance, you may still find the need for occasional maintenance, reconditioning or upgrade.

When that happens, there's no better

place to turn. Our experts can recondition your pump to meet factory tolerances and performance – often for lots less than doing it yourself or sending it out to somebody who knows it less well than we do.

What's more, your repaired pump will meet the same high standards as a brand new Double Disc pump. And it'll be backed by a one-year factory warranty.

### Here's what you can get:

- Expert maintenance from the people who designed and built your Double Disc Pump.
- Fast turnaround for minimal downtime.
- Genuine Double Disc pump parts, for optimum performance.
- One year standard factory warranty.
- In many cases, the latest design or specification updates for maximum service life.
- Improved reliability, without the uncertainties and delays often associated with self repair.
- Reduced labor hours and parts inventory.
- Reduced long-term ownership costs.

# FOUR OPTIONS FOR BETTER PERFORMANCE.

## Option #1: Exchange for a reconditioned model.

It's really very simple. We'll send you a factory reconditioned model, and you send us your pump in exchange. You'll save significant downtime while getting the high level of Double Disc Performance you've come to rely on. We'll issue you a credit for the difference.

## Option #2: Get an upgrade.

Take advantage of the latest design and engineering advances with the latest Double Disc model. We'll send you a new pump in exchange for your old one, and issue you a credit for the difference.

## Option #3: Reconditioning that's fast, easy, and thorough.

Send us your entire bareshaft pump or drive assembly. We'll disassemble it, inspect all its parts, and provide a complete estimate for the repair (you pay for shipping and refurbishment). Once you approve the estimate, repairs generally take just three working days.

## Option #4: Do It Yourself with genuine Double Disc parts.

There's nothing generic about the quality, performance, and reliability of your Double Disc pump. Because there's nothing generic about genuine Double Disc parts. For optimum performance, you shouldn't settle for anything else. And since we're the manufacturer, we certainly don't.

## We stand behind our work.

We're so confident in our work that we offer a limited one year warranty on material and workmanship on all exchanged/refurbished units. This covers the reconditioned bareshaft pump or drive assembly only (excludes existing motors, gearmotors, VFD's, etc.).

## How to ship us your unit.

We want to make it easy. Just give us a call. We'll provide a Return Authorization Number and a completed Bill of Lading for an approved carrier to return the items to us collect. All freight charges will be added to the final invoice.
